Project Report

Name : Avika Panday

Registration Number : 25BCE10928

Branch : CSE(Core)

Year : 2025(First Year)

Course Code : CSE0001

Date : 31 - 03 - 2026

Introduction

In today’s digital era, the utility technology is not optional but necessary for academic, professional, and personal growth and development . Digital literacy enables individuals to access, evaluate, create, and communicate information using digital platforms responsibly and efficiently.Moreover it helps to optimise digital content and enhance their optimal usage . As students increasingly rely on online tools for learning , it also helps to navigate digital world safely and therefore it is necessary to learn about them for ethical growth.

This Digital Literacy Portfolio has been developed as part of my role of a Student Digital Ambassador, where my prime objective is to explore various aspects of digital literacy, including creation of a digital footprint ,developing problem - solving and coding skills and with the help of corporate mechanism to understand the etiquettes of writing an email , and raising awareness about cybercrime and online safety. Each task in this portfolio is designed to build pragmatic skills that are relevant in today’s AI -driven world.

Reflecting on my learning journey,I aim to enhance my own digital competencies that can help my peers navigate the digital environment more effectively and safely .The portfolio serves a record of my learning journey and highlights the importance of being an informed and knowledgeable digital citizen.

Task 1

I created my Digital Literacy Awareness infographic using Canva. Canva is an easy-to-use online design application that provides templates, icons, and customization options and is user friendly . My infographic covers three main topics: digital literacy, safe internet practices, and useful digital tools for students. I defined digital literacy as the capacity to master digital technologies and evaluating online content.I also covered the important part about safety while using online applications by creation of strong passwords and avoid trusting on online links. It is quite important to be aware of what happens in technical world to be safe and access the technology to the fullest without any hesitation of falling in the trap of online fraud. In today's AI driven world it is inevitable without technology and being a part of it brings own development and building up of new skills and ethics.

Additionally, I listed tools like Google Docs, Google Drive, and Microsoft Teams that are often used by students.
An interesting part of this task was the designing of layout using different options which depicted the information more clearly , however it was bit difficult to keep content short but reveal important points

#Digital Literacy

What is Digital Literacy

Ability to use digital tools effectively
Find, evaluate, and share information online

Safe Internet Practices

Use strong passwords
Don't share personal info
Beware of fake links & scams

Useful Digital Tools

Google Docs – for assignments
Google Drive – for storing files
Zoom – for online classes

Task 2

For this task, I built my digital profile on GitHub, LinkedIn, and Kaggle. GitHub is a platform used to store and manage code and projects. I created a profile README to introduce myself and my objectives. LinkedIn is a professional networking platform where I added my education details and created a basic professional profile. Kaggle is used for data science and machine learning, and I set up my account to explore datasets and practice more of AI skills.

Over the next four years, I plan to use GitHub to not only build projects but also enhance my problem solving skills with help of DSA . I will use LinkedIn to build professional connections and apply for internships, projects and beware for more opportunities . On Kaggle,apart from learning about data analysis and datasets my focus is to participate in contests . These applications provide users not only to develop connection but also bring growth , knowledge and skills .LinkedIn helps to develop more connection with all people all across the world ,GITHUB helps to save projects which could be used and help companies to view employees skills and problem solving approach and

serve as a baseline whether an individual would serve company and boost the growth of an organization.
These platforms will help me develop a strong digital outreach and improve my career opportunities .

Task 3

For this task , I used HackerRank and explored Google Workspace tools. I used HackerRank to practice coding and completed a beginner-level problem called “Solve Me First,” which built my confidence on coding and problem solving ability .It also taught me about basic logic building is and how it will help me develop my programming skills.

With the help of Google Tools I built a Digital Literacy Awareness Quiz consisting of both Multiple choice and Short answer type questions which is built with help of Google form . It will help to analyse how much people are aware of digital literacy threats and its further consequences.These applications help students in building real world models and HackerRank promotes problem solving and coding skills which will help students in placements and Google tools helps to manage data by creating and analysing real world models.

As a college student these tools are essential like practicising questions daily on HackerRank will improve my coding skills and will set me apart from others and Google form will help to conduct surveys and efficiency analysis on various arenas . As a Digital Ambassador, I can use these tools to have a

connection with my peers and spread awareness about digital world around us .

Change Theme Language C++11

```cpp
#include <cmath>
#include <cstdio>
#include <vector>
#include <iostream>
#include <algorithm>
using namespace std;

int solveMeFirst(int a, int b) {
 return a + b;

}

int main() {
  int num1, num2;
  int sum;
  cin>>num1>>num2;
  sum = solveMeFirst(num1,num2);
  cout<<sum;
  return 0;
}
```

Congratulations

Digital Literacy Awareness Quiz

Form description

What is digital literacy? *

Short-answer text

Which is a safe password?

Multiple choice

- 12345
- password
- Strong@123

Which tool is used for online meetings? *

- Zoom
- Paint
- Notepad

What should you avoid sharing online? *

Short-answer text

Which platform is used for professional networking? *

- LinkedIn
- Instagram
- WhatsApp

Task 4

Poor digital communication can lead to serious misunderstandings. For instance, an email to a written by a student to a professor without a subject line or use of informal language like “Hey” or “Send marks fast,” appears disrespectful and mannerless . This could negatively impact the student’s image and response from the professor.This results in negative feedback and bridge the gap of communication.

Proper email etiquette should be followed in every professional and working environment,which includes a clear subject line, polite greeting, and respectful tone. The message should be well-structured ,concise and to the point. Use of professional language and proper conclusion makes communication effective and mannered. Following proper approaches can make email effective and build a positive feedback in receiver’s perspective.

Task 5

After analysis , it was pretty sure that it is very easy for scammers to make people fall in the circle of cyber fraud victim . It is very easy task for attackers to manipulate common people and ask for their OTPs and passwords . They don’t just rely on technical hacking but also on manipulating commoners. Even educated individuals fall in the trap of scammers and suffer huge losses.

Taking small steps like not sharing passwords, UPI pin and personal information can also make a huge difference and prevent major financial loss and trouble. Therefore it is very important to beware of these so as not to be trap in such a fraud. As a Digital Ambassador, I can help others stay informed and avoid such scams.

Conclusion

Ultimately, this Digital Literacy Portfolio highlighted the importance of digital skills in today's world. By completing the various tasks, I learned how to build digital footprint, gain proficiency in coding and collaboration platforms, and master the communication skills effectively using proper email etiquette. I also equipped awareness to recognize cybercrime and various threats and ways to stay safe online.

This project boosted my confidence in using digital tools responsibly and efficiently and also highlighted the importance of how small but crucial actions, like secure passwords and professional communication, can make important changes.

As a Student Digital Ambassador, I feel confident to mentor my peers and promote safe digital practices. Overall , this project is truly rewarding for my personal , academic , professional growth
